New humidifier with ultrasound technology ensures an optimal room climate

Neuss, Germany. Allergy sufferers particularly have difficulty dealing with the effects of dry, heated air during the cold months of the year. The new MEDISANA humidifier AH 660 helps users adjust room climate to suit their personal needs. Its ultrasound technology atomises moisture, spraying it as a micro-fine mist. The saturation of water in the air can be continuously adjusted as well. The result: mucous membranes are protected from drying out, eyes and respiratory tract are less irritated and it is easier to breathe.

The MEDISANA humidifier is also energy-saving, quiet and very easy to use thanks to its detachable water tank that is equipped with a water filter to prevent the accumulation of chalky deposits. The appliance switches off automatically as soon as the 4.5 litre tank is empty and humidifies rooms up to 30 square metres in size.

The humidifier is now available in specialist stores and at www.medisana.de for €79.95 (RRP).
